Education

University of Western Ontario

Sept 2023 – May 2028

B.Sc. Honours Specialization in Computer Science, Minor in Software Engineering

London, Ontario

Technical Skills

Languages & Technologies: Java, Python, SQL, VBA (Excel), JavaScript, C#, C, C++, HTML/CSS, JSON

Tools & Platforms: Microsoft Office Suite (Excel, Word, PowerPoint), Azure SQL, AWS (basic),

Git/GitHub/GitLab, VS Code, Visual Studio, Eclipse

Skills: Full-stack Development, Backend Development, API Integration, Database Design (SQL),

Object-Oriented Programming, Debugging, Problem Solving, Agile Collaboration

Work Experience

Software Development Intern

May 2025 – Aug 2025

Comtrad Strategic Sourcing Inc

Mississauga, Ontario

- Built a **full-stack online product catalogue** with a **Python backend** and an **HTML/CSS/JavaScript frontend** to display **6,400+** products with real-time quantity tracking.
- Integrated the system with an **Azure SQL Database**, enabling seamless **updates and retrieval** for all product listings, ensuring consistent and accurate data access across internal systems.
- Implemented filtering by buyer and category, streamlining product searches and **enhancing user accessibility** for employees and clients.
- Deployed and maintained the platform on the company's production database system**, supporting ongoing use by internal teams and ensuring scalable, reliable operation.

Graphic Design Intern

May 2024 – Aug 2024

Comtrad Strategic Sourcing Inc

Mississauga, Ontario

- Photographed and edited 300+ product images**, applying scripts and adjustments to ensure consistency and professional quality.
- Developed and structured a digital image catalogue** that improved accessibility and searchability for marketing and product teams.
- Standardized branding across digital and print materials by **collaborating with marketing**, ensuring alignment with updated brand guidelines.
- Organized and renamed a large library of product visuals, creating a clean asset system that **reduced search time and improved workflow efficiency**.

Projects

Cervical Cancer Biopsy Classification | Python, scikit-learn, Pandas, NumPy, Matplotlib

Sept 2025 – Dec 2025

- Built an end-to-end ML pipeline to predict cervical cancer biopsy outcomes using **800+ patient records** with demographic, behavioural, and clinical risk factors.
- Addressed substantial missing data and severe class imbalance** (~6% positive cases) using median imputation, class weighting, and SMOTE; trained and tuned **Decision Tree, SVM, and XGBoost models**.
- Evaluated models using ROC/AUC and recall; tuned XGBoost achieved **0.95 AUC** on a held-out test set, with feature importance analysis highlighting key clinical risk predictors.

CityShield | C++, Qt, Object-Oriented Design, Design Patterns

Sept 2025 – Dec 2025

- Built a turn-based emergency response simulation in **C++ and Qt**, modeling a tiled city environment with dynamic incidents and responder units.
- Designed core domain abstractions (responders, incidents, tiles) and applied **Factory, Strategy, Command, and Observer** patterns to ensure extensibility and clear separation of responsibilities.
- Architected a **modular, event-driven system** by decoupling core simulation logic from the Qt UI layer, improving testability and maintainability.

Virtual Pet Game | HTML/CSS, Java, JavaScript, JSON, GitLab, VS Code

Jan 2025 – Apr 2025

- Developed a desktop virtual pet game in **Java (Swing)** with web-based supporting interfaces for interactive features.
- Followed a full development lifecycle — **requirements, design, implementation, testing, demo, and postmortem** — ensuring organized and efficient delivery.
- Built persistent save/load, tutorial, and parental controls, with stability and usability verified through **JUnit tests, JavaDoc, and Git/GitLab version control**.
